Female Sale

MCCORMICK

FUNDAMENTALLY *Reds* FOCUSED

Welcome!

Thank you for considering the bred females in this offering and for your interest in learning more about McCormick Reds. We're proud to present a group of females that reflects years of breeding, selection, and a commitment to continuous improvement. Many represent more than 20 years of focused effort, and we believe they have the potential to make a lasting, positive impact on your herd.

Our focus at McCormick Reds is breeding fundamentally sound Red Angus cattle. Fertility, mothering ability, structural soundness, fleshing ability, disposition, and optimal mature cow size are the pillars of our program. We continually strive to improve growth and carcass performance, but never at the expense of these fundamentals. We believe cattle built on a strong foundation give our customers the greatest opportunity to be profitable in any market condition.

This offering represents a cross-section of our herd, ranging from bred heifers ready to make their contribution to a proven donor. Most are coming three-year-olds that have already demonstrated their value by calving unassisted, nurturing a marketable calf, and breeding back in a timely manner.

We selected the females for this offering based on their place in our calving schedule. This approach allows us to maintain a concentrated, labor-efficient calving season while creating an opportunity for you to purchase females we might not otherwise make available.

This catalog includes the key information you'll need to evaluate the offering. If you have questions, would like additional details, or want to see the cattle in person, please don't hesitate to reach out. One of the most rewarding parts of this business is the relationships we build with fellow cattlemen, and we always welcome the chance to connect.

Thank you again for your interest in McCormick Reds. We appreciate your consideration and look forward to visiting with you.

Paul & Jackie McCormick

Sale Information

HEALTH All females are vaccinated annually with ViraShield 6 + VL5 HB (killed vaccine) and ScourBos, and are on a regular parasite control program.

DNA TESTING All females have been DNA tested for genomically enhanced EPDs and parentage verification. Any female with a known carrier of a genetic condition within her first three generations has been tested and is free of that condition.

PREGNANCY INFORMATION & GUARANTEE All females have been ultrasounded by our veterinarian. Due dates, fetal sex, and other pregnancy details listed are our best estimates and are not guaranteed.

We guarantee bred females are pregnant at the time of sale. We cannot guarantee delivery of a live calf.

If you have concerns regarding the pregnancy status of a bred female upon arrival, you must notify us within 30 days of receiving the animal. A refund request must be accompanied by documentation from a licensed veterinarian confirming that the female is not pregnant. McCormick Reds will issue a sale credit for the sale price of the female less her salvage value. The credit may be applied toward a future McCormick Reds purchase.

DELIVERY Free delivery is available within 100 miles of our farm. For destinations beyond 100 miles, a \$100/head delivery credit will be applied to the purchase price, and we will do our best to help coordinate transportation.

PAYMENT Payment is due at time of purchase by cash, check, or wire transfer. Cattle will be released once funds have cleared. Registration papers will be transferred to the buyer through the Red Angus Association of America after payment has cleared. Risk of loss passes to the buyer at loading, or upon delivery when cattle are hauled by McCormick Reds.

COMMERCIAL DISCOUNT A \$500/head discount applies to any female sold without registration papers.

VOLUME DISCOUNT

2-3 head: \$150/head

4-6 head: \$250/head

7+ head: \$350/head

COMMERCIAL AND VOLUME DISCOUNTS MAY BE COMBINED.

No warranties, express or implied, are made other than those stated above.

DOCILITY

We place an emphasis on raising docile cattle that are enjoyable and safe to work with. While temperament can vary among individuals, we believe it's important to be transparent and consistent in how we evaluate it.

All cattle in this offering have been scored on a 1-5 scale based on observed behavior during daily handling. Cattle scoring 1 or 2 are not acceptable in our program and have been culled accordingly.

Here's how to interpret the scores:

- 3 - Calm and manageable in a group setting but may become nervous or flighty when isolated.
- 4 - Easy to work with both in a group and individually.
- 5 - Exceptionally docile cattle that are friendly, approachable, and may even allow you to scratch them in the pasture

FRAME SIZE

Our breeding objective is to produce medium-sized cows that thrive in real-world conditions. While we have not taken formal frame score measurements on the cattle in this offering, each animal has been visually evaluated and assigned a size designation based on our experience and judgment.

We use the following simple scale to describe frame size:

- “-” = Below average for frame size
- “0” = Average frame size
- “+” = Above average for frame size

This system is intended to give you a quick reference. If you have questions about how an individual animal fits into your environment or management system, we'd be happy to visit with you.

Rushmore was the high-selling bull at the 2024 Rhodes Red Angus bull sale. He offers a unique pedigree, fleshing ability, maternal function, and real-world pounds in a medium-sized package. His dam, Copperqueen 9023, records a 103 weaning ratio on six calves with a 366-day calving interval. His first two calf crops have not disappointed, reinforcing our confidence in him. Unfortunately, Rushmore was lost to a broken leg in the spring of 2026, and semen supply is limited. We look forward to using his genetics and watching his influence continue through his sons and daughters.

Testify is the Township son we have selected to carry forward. We value the calf vigor, moderate size, and maternal function Township contributed, and we believe Testify builds on those strengths with added scale and performance while maintaining breed character. His dam, Holly 7736, records a 102 weaning ratio on eight calves with a 363-day calving interval.

3346 joined our program from Rhodes Red Angus. This black-hided herd sire brings an outcross pedigree, maternal integrity, and the balance we value in a breeding sire. His pedigree traces to Basin Primrose 4167, a foundation female of the breed, and SAV Resource 1441, an influential Angus sire. We appreciate the genetic diversity and maternal foundation he brings to our herd.

558 is a red-hided son of 3346 who caught our attention as a calf. He comes from a cow family we know and value, and his pedigree adds another dimension to our program. He offers the balanced phenotype of his sire with added size and performance potential, making him an exciting prospect for the future.

7736 is the foundation of our Holly cow family. We have worked with this family since my dad purchased a set of cows in the spring of 2004 that included Holly, a Glacier Logan 210 daughter. The Hollies offer size and scale while maintaining fleshing ability and maternal function. 7736 has maintained a 363-day calving interval across eight calves, all while producing the conventional flush that gave us Testify!

Pasture exposed to RREDS Resource L3346 #4845492 from 5/15/26 through 8/15/26 and MR Resource 558 #5114793 from 7/16/26 through 8/15/26. Due March 27, 2027, with a bull calf.

105 stems from the long-lived Rebella cow family. Her granddam, L145, was a foundation cow for us. We purchased L145 as a 12-year-old, and she remained in production until she was 16, raising 15 natural calves with a 95 birth ratio and a 103 weaning ratio. 105 carries on that maternal legacy with a high-quality udder and a feminine, refined design. Pasture exposed to RREDS Resource L3346 #4845492 from 5/15/26 through 8/15/26 and MR Resource 558 #5114793 from 7/16/26 through 8/15/26. Due March 21, 2027, with a bull calf.

10	-0.6	62	97	25	15	0.11	0.36

430 is a 64H daughter out of the influential Ophelia 5109 x Cinch flush. These Ophelia females offer a great balance of frame, structural integrity, and maternal function. With this strong foundation, the mating possibilities are endless.

Pasture exposed to RREDS MR Testify 328 #4742519 from 5/15/26 through 8/15/26. Due March 10, 2027, with a bull calf.

Lot 5

436 is an ET maternal sister to the dam of Rushmore. Her dam, 7111, was a black/red carrier, and we loved the idea of mating her to H037, another black/red carrier. That flush could have produced red-hided calves or homozygous black calves. Every calf turned out to be a black/red carrier, and 436 was the only heifer. She calved with twins this past spring as a first-calf heifer. The bull calf we kept, 602, is one that excites us! He is red-hided, weaned at an actual 800 pounds, masculine in his design, and loaded with character.

The seller will retain the right to one flush or aspiration at the buyer's convenience, at the seller's expense.

Pasture exposed to RREDS MR Testify 328 #4742519 from 5/15/26 through 8/15/26. Due April 15, 2027, with a bull calf.
